

## Санкт-Петербург. Комплексная модернизация распределительных сетей ГВС и отопления

Начав с поставки в 2007 году первых 8 километров труб теплосетевым организациям Санкт-Петербурга, к концу 2011 года Группа ПОЛИМЕРТЕПЛО преодолела рубеж в 300 км труб, использованных за это время компаниями ГУП «ТЭК СПб» и «Петербургтеплоэнерго» для реализации программ реконструкции теплосетей северной столицы.

В условиях острейшей конкуренции с региональными и ведущими европейскими производителями гибких полимерных труб, продукция Группы ПОЛИМЕРТЕПЛО оказалась наиболее востребованной крупнейшими операторами модернизации теплосетевой инфраструктуры Санкт-Петербурга.

### POLYPLASTIC Group TODAY

#### Moscow. JSC "MIPC" district heating networks reconstruction

POLYMERTEPLO group is a technological partner of the world largest heating network company – JSC "Moscow Integrated Power Company" – in implementation of Moscow district heating networks reconstruction program.

In 2001–2011, more than 2,000 km of hot water and heating supply networks (that is 40% of pipelines to be replaced) have been replaced with ISOPROFLEX and CASAFLEX pipe systems.

As a result, the accident rate on polymer pipe networks in Moscow became lower in comparison to European; the overall makeup recharge of heating systems halved. It made possible to reduce hot water summer off period from 14 to 10 days, and the refusal of planned outages now is a perspective for future. By reducing the heat losses, the city has got additional thermal capacity for housing construction without creating new sources of generation.

#### St. Petersburg. Comprehensive modernization of hot water supply and district heating networks

Starting in 2007 with delivery of the first 8 kilometers of pipes to district heating companies of St. Petersburg, by the end of 2011 POLYMERTEPLO Group crossed the mark of 300 km of pipes utilized by all major local district heating companies for network upgrade projects of the "Northern Capital of Russia".

In spite of very close competition with regional and leading European manufacturers of flexible polymer pipes, POLYMERTEPLO Group products became highly demanded by heating network companies working on infrastructure modernization in St. Petersburg.
